

### **marine science 2012 study pdf**

Meso-zooplankton food-webs in intermittent upwelling systems: An overlooked link in a productive ocean. Eastern boundary currents are among the most productive marine ecosystems on the planet and support a significant proportion of global fisheries, yet there are unanswered questions about the role of non-crustacean zooplankton in transferring production through upwelling food webs.

*M. californianus* were collected from Bodega Head, CA in May 2012 and 2014 and held in filtered seawater tanks for one month to allow depuration of toxins (Bricelj and Shumway, 1998). Cages with mussels were attached to moorings throughout SFB (June 2012 and 2014), at all stations marked on Fig. 1. Mussels were harvested for analysis in September each year, after 100 days deployment.

1. Introduction. Marine debris contaminates the world's oceans from Polar Regions to the equator (Gregory and Ryan, 1997, Barnes et al., 2009, Zarfl and Matthies, 2010), and is found floating at the sea surface (Ryan and Moloney, 1993, Barnes and Milner, 2005), on the seafloor (Galgani et al., 2000) and on shorelines (Barnes and Milner, 2005). ...

We are working to address the technical and scientific barriers of marine aquaculture and to provide science information for management in a number of ways, including through in-house research at NOAA, grants and cooperative agreements with Sea Grant and other stakeholders, and by coordinating research with other federal agencies.

Healthy marine species like whales, sea turtles, coral, and salmon are important for maintaining balanced and thriving ocean ecosystems. We work to prevent marine species populations from decline and extinction, protect them from human activities, and monitor activities that might impact them so they are around for future generations.

The Scottish Association for Marine Science (SAMS) is Scotland's premier independent marine science organisation generating new knowledge for the benefit of the marine environment and society since 1884.

### **About – The Scottish Association for Marine Science**

An ocean (from Ancient Greek ὠκεανός, trans. Okeanos) is a body of saline water that composes

much of a planet's hydrosphere. On Earth, an ocean is one of the major conventional divisions of the World Ocean. These are, in descending order by area, the Pacific, Atlantic, Indian, Southern (Antarctic), and Arctic Oceans. The word "ocean" is often used interchangeably with "sea" in ...
